

Economist Carrie Bentley Joins Resero Consulting

Resero Consulting has announced that economist Carrie Bentley has joined the firm as a senior consultant. Ms. Bentley will be providing market and regulatory support and expert services to Resero's clients, focusing on the western markets.

"We are pleased to welcome Carrie to our team," said Ellen Wolfe, president of Resero Consulting. "She brings to Resero a deep understanding of CAISO policies and the nexus between economics and the physical grid, as well as experience in the southern US markets."

Ms. Bentley most recently worked to develop market designs and regulatory policies at the CAISO, leading design and stakeholder initiatives on critical issues such as the integration of renewable and preferred resources, procurement of capacity, and enhancement of the real-time energy market. In 2015, she led the Reliability Services, Capacity Procurement Mechanism, and Flexible Ramping Product initiatives. Ms. Bentley also worked in the CAISO's Department of Market Monitoring, discriminating between participants' legitimate market activities and activities potentially warranting referrals.

Before her work at the CAISO, Ms. Bentley was a project consultant for GDS Associates, an engineering and economics consulting firm, where she advised a diverse clientele in power supply contracting, natural gas hedging, and energy market design. Her largest project involved helping SPP to create its day-ahead market. She graduated with an MS in economics, *summa cum laude*, from the Georgia Institute of Technology, and holds a BA in economics from Agnes Scott College.
